

Patriot Techcorp announces the release of the Global Patriot™ program

Patriot Techcorp – leaders in Compliance & Technology Solutions

April, 2006

Patriot Techcorp', ("Patriot"), product innovation for its compliance solutions has continued from the initial release of the OFAC Patriot™ and FinCEN Patriot™ programs in 2004, designed to specifically address U.S. government regulations, to the release of the Global Patriot™ program in 2006.

Patriot reaches a significant milestone with the release the Global Patriot™ program, providing a cost-effective tool to address the global legislation issues for Anti-Money Laundering (AML), Anti-Terrorism, the USA PATRIOT Act, Office of Foreign Assets Control (OFAC), Bank Secrecy Act (BSA), and other related domestic and foreign governmental regulatory requirements and risk assessment.

The Global Patriot™ program provides significant usability improvements over its competitors as well as a real return on the software investment, with improved productivity and fully audited results for compliance officers in financial institutions and other regulated industries.

The Global Patriot™ program is a software application that was designed to take compliance to the next level by providing:

- structured, risk-related intelligence to assist government, financial institutions and other government mandated entities
- coverage for entities both domestically in the United States and in countries around the globe
- facilities to achieve compliance with associated legislative issues
- assistance to further government policies and achieve national and international security objectives

The Global Patriot™ program consolidates and organizes unstructured information into a database of highly structured profiles to be used to filter virtually unlimited amounts of transactional and other data for the presence of known high-risk entities. The Global Patriot™ program takes the unstructured data from a multitude of data sources and then correlates the data in a usable format in order to provide structured intelligence for client processing utilization.

Patriot's data sources range from international organizations such as the United Nations Organization (UNO), Interpol and a host of other international agencies, to U.S. national government sources such as the CIA, FBI, Financial Services Authorities, OFAC and others.

As intelligence is gathered from the pertinent sources the data is correlated into a structured file database located within a central repository that is securely managed by Patriot Techcorp.

The Windows version is designed for single users and desktop applications and it works with all Windows operating systems. The Windows version can also be installed over a network providing the function of sharing common client Data files, Accept lists, updated Data lists, and Output Search Result report files

The Global Patriot™ program is available as a Standard Package which includes data files from a selection of ten (10) available data sources and also as a Premium Package which includes data files from over twenty-five (25) available data sources.

About Patriot Techcorp

Patriot Techcorp, Inc. is a software research and development and network security management services firm that specializes in combining advanced technology with vision and innovation to produce quality products and cost-effective solutions.
